Overview

KasiConnect - Local Service Provider Booking Platform

1. KasiConnect is a web-based platform that connects customers with local service providers such as plumbers, cleaners, electricians, and caretakers. The system allows users to register, browse providers, book services, and manage bookings efficiently.

2. User Roles:

   2.1 Customer:
   - Register and login
   - Browse service providers
   - Book services
   - View booking status
   - View booking history

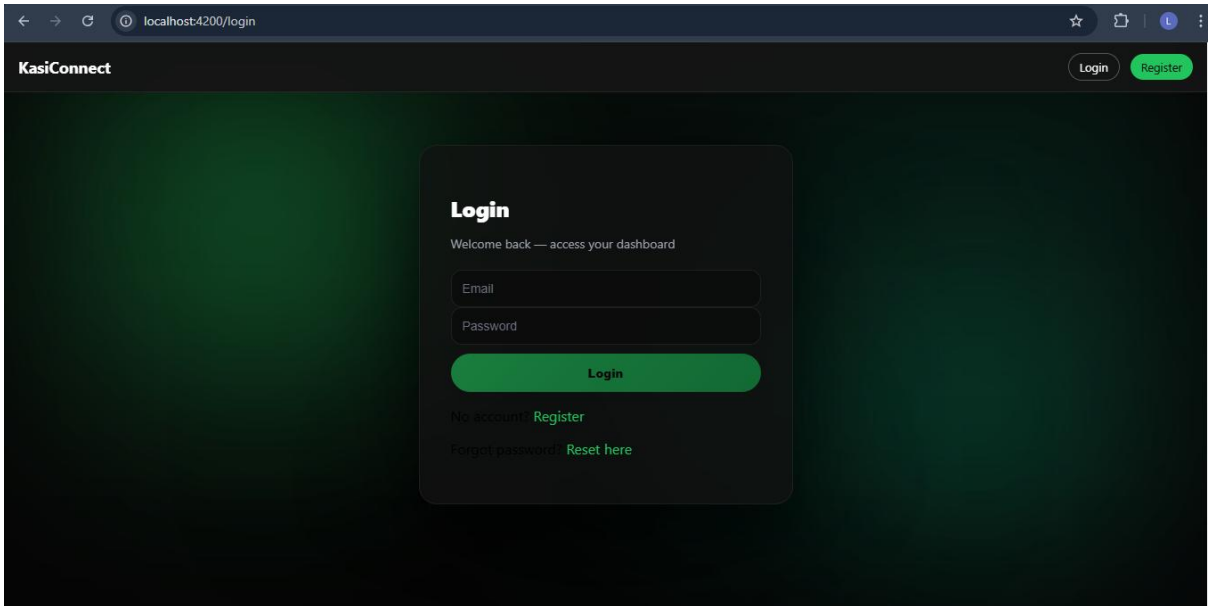
   2.2 Provider:
   - Login
   - View incoming bookings
   - Accept, reject, or complete bookings
   - View job history

3. Authentication

   3.1 Registration:

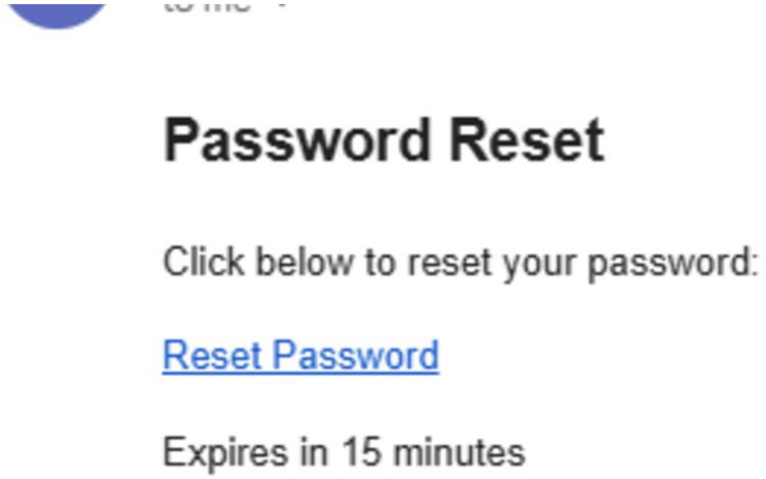
   Users create an account by providing:
   - Name
   - Email
   - Password
   - Role (Customer / Provider)

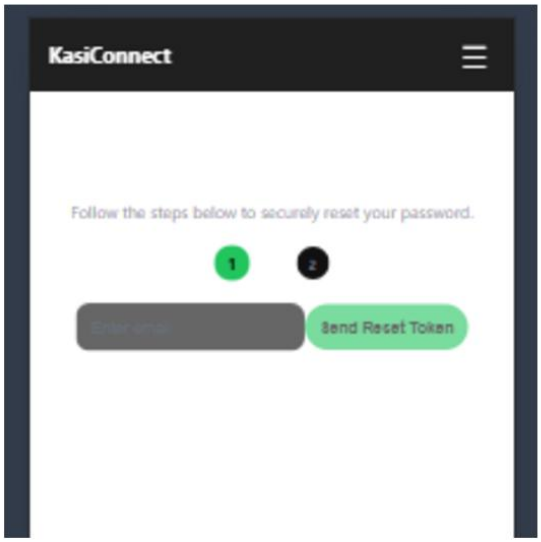
   3.2 Login:
   - Users log in using email and password
   - A JWT token is generated and stored locally

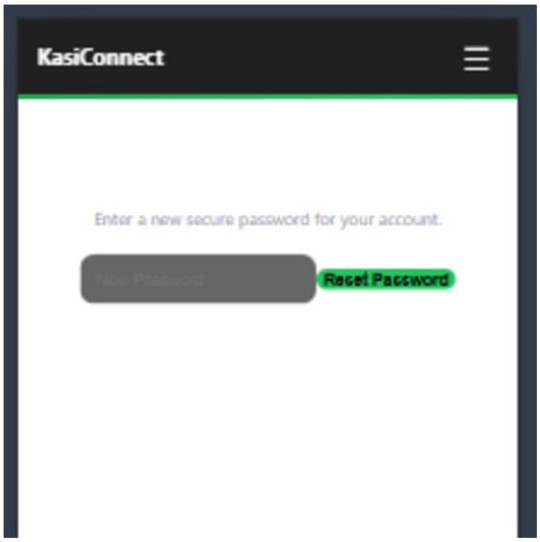


3.3 Forgot Password:

- User enters email
- System generates reset token
- User resets password using token



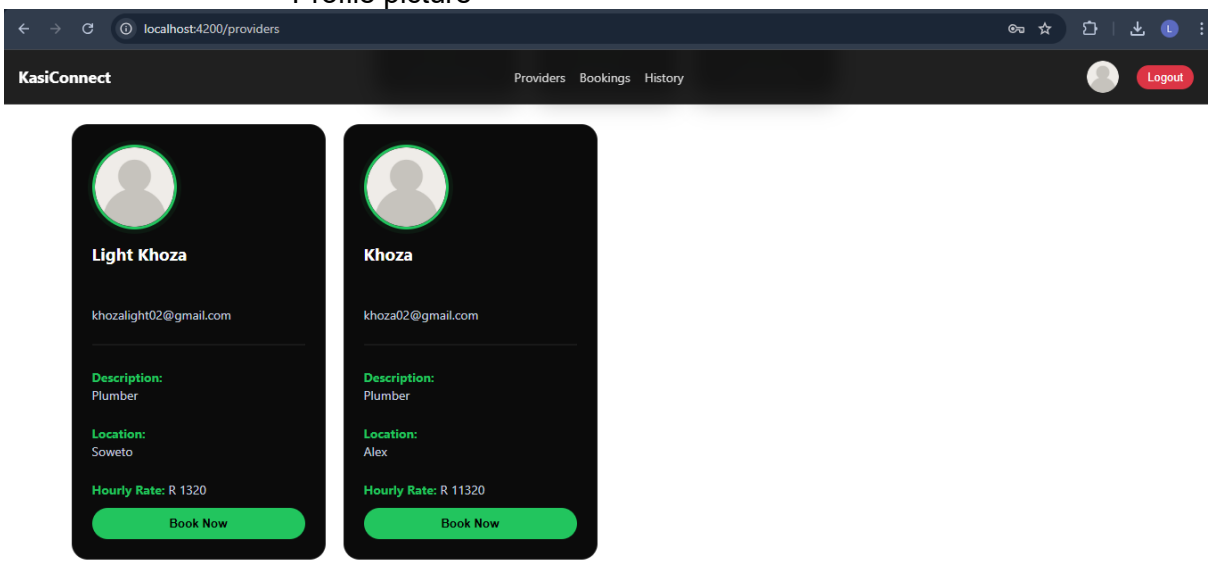




4. Customer Features

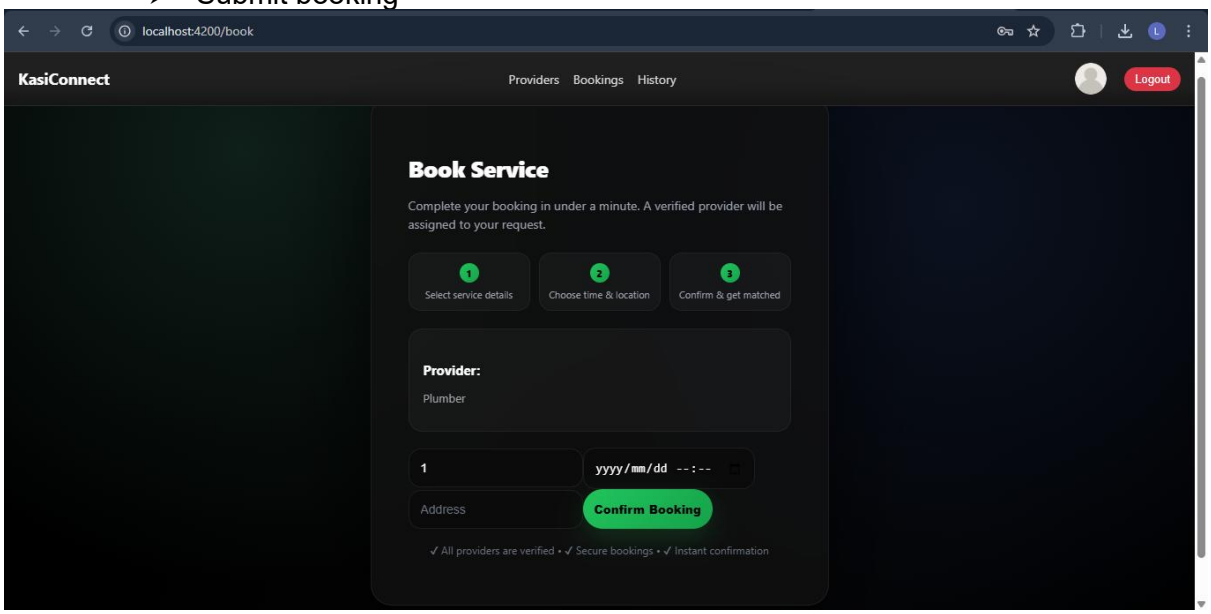
4.1 Browse Providers:

- Navigate to **Providers**
- View list of available providers
- Each provider shows:
  - Name
  - Email
  - Description
  - Location
  - Hourly rate
  - Profile picture



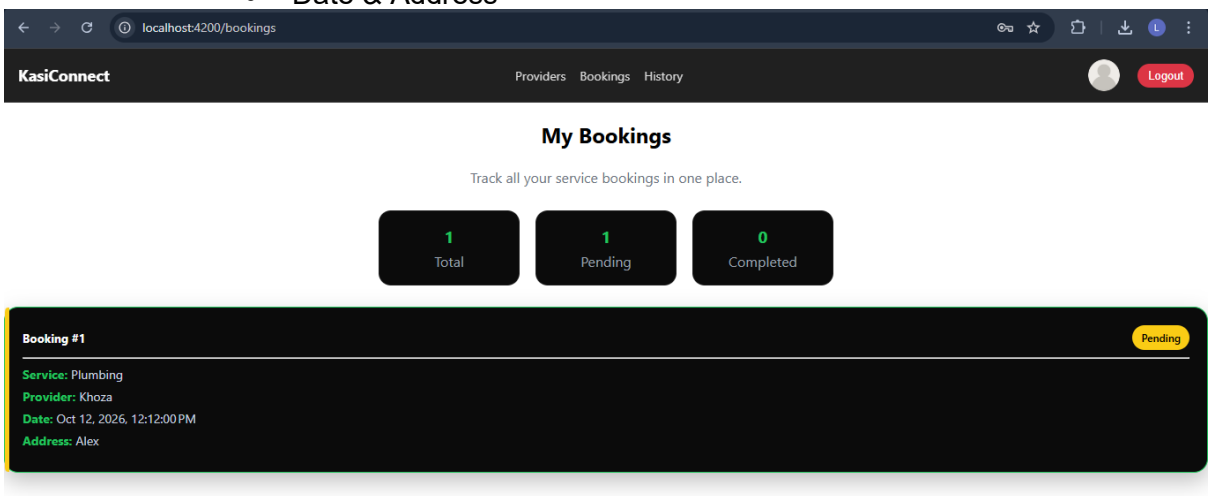
4.2 Book a Service:

- Click **Book Now**
- Enter:
  - Date & time
  - Address
- Submit booking



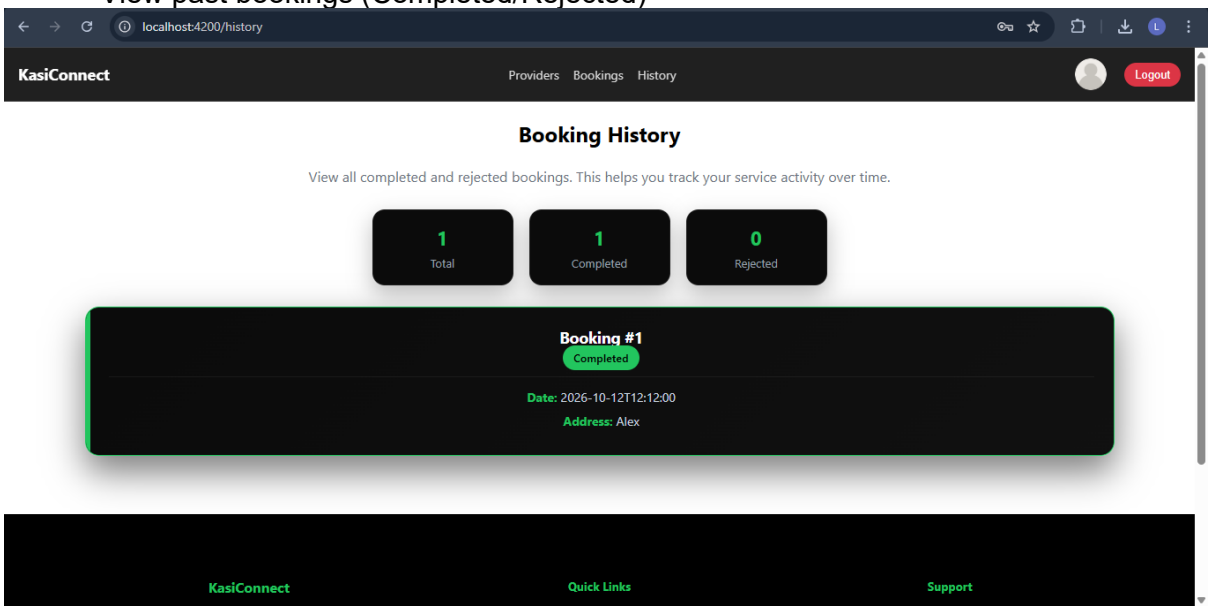
4.3 View Bookings:

- Navigate to **My Bookings**
- View:
  - Booking ID
  - Status (Pending, Accepted, Completed, Rejected)
  - Date & Address



4.4 **Booking History**

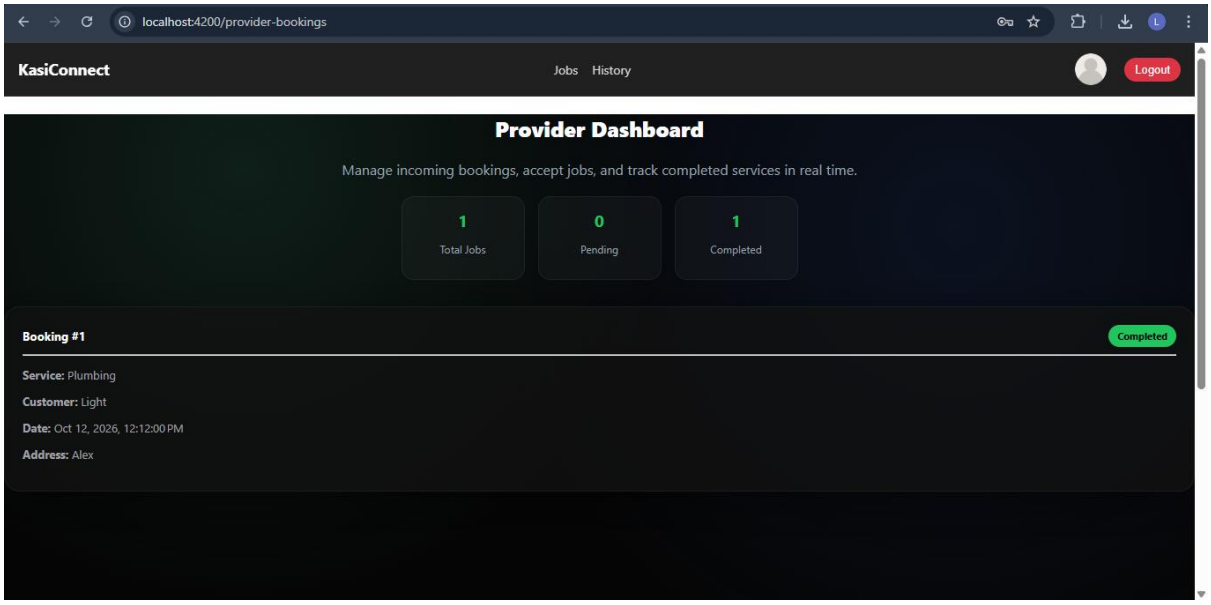
- View past bookings (Completed/Rejected)



5. Provider Features

5.1 View Incoming Bookings:

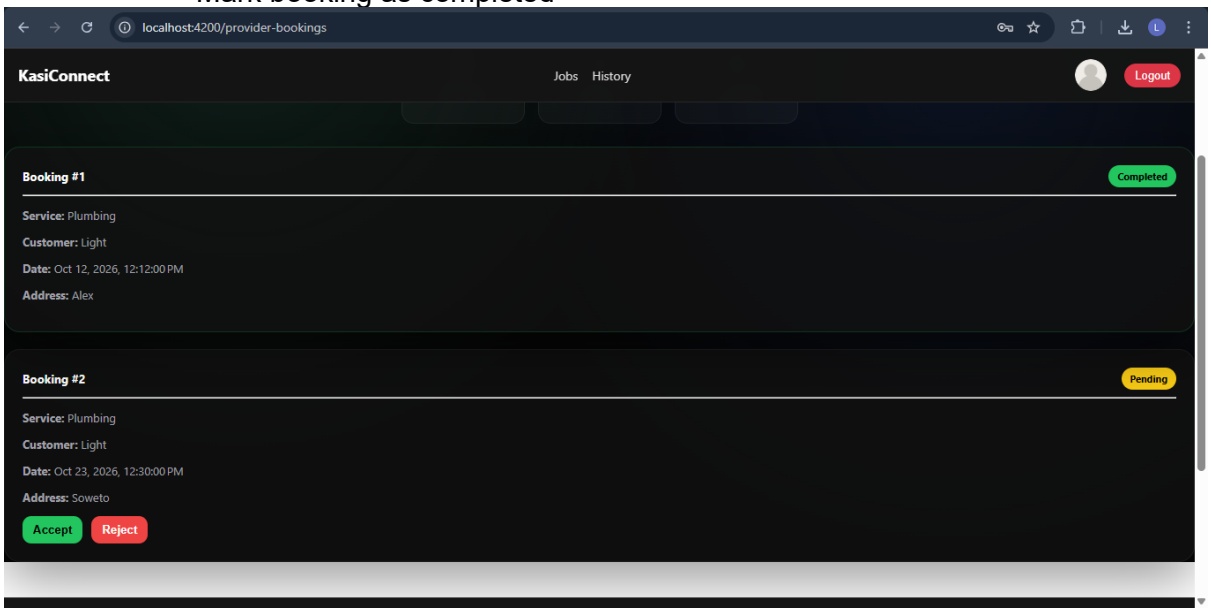
- Navigate to **Jobs**
- See all customer requests



5.2 Update Booking Status

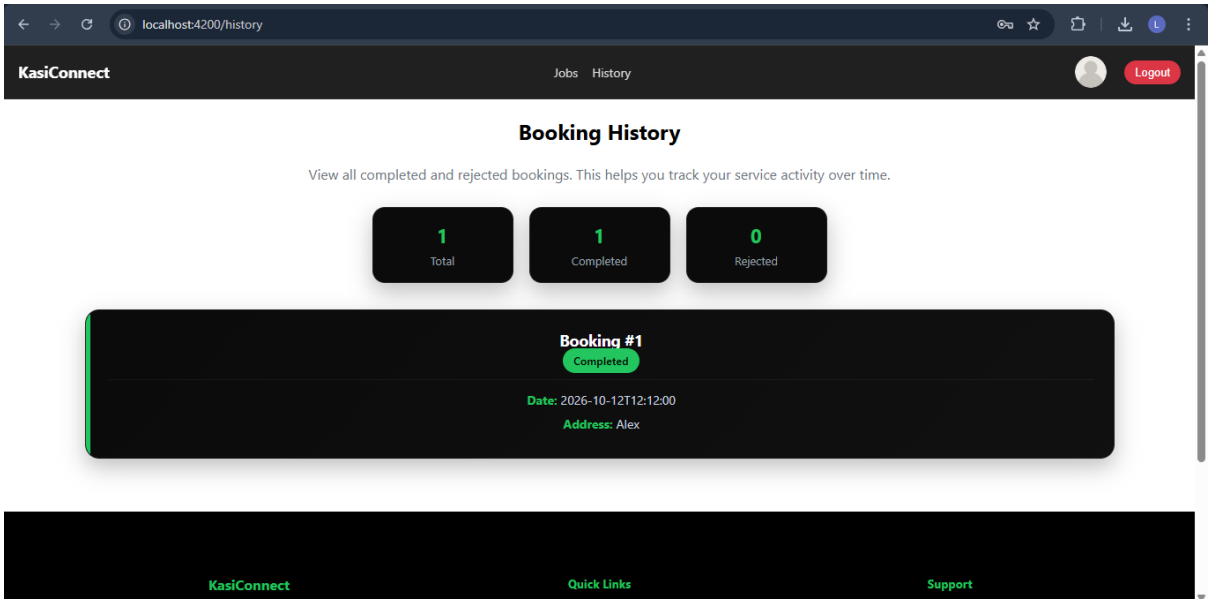
Providers can:

- Accept booking
- Reject booking
- Mark booking as completed



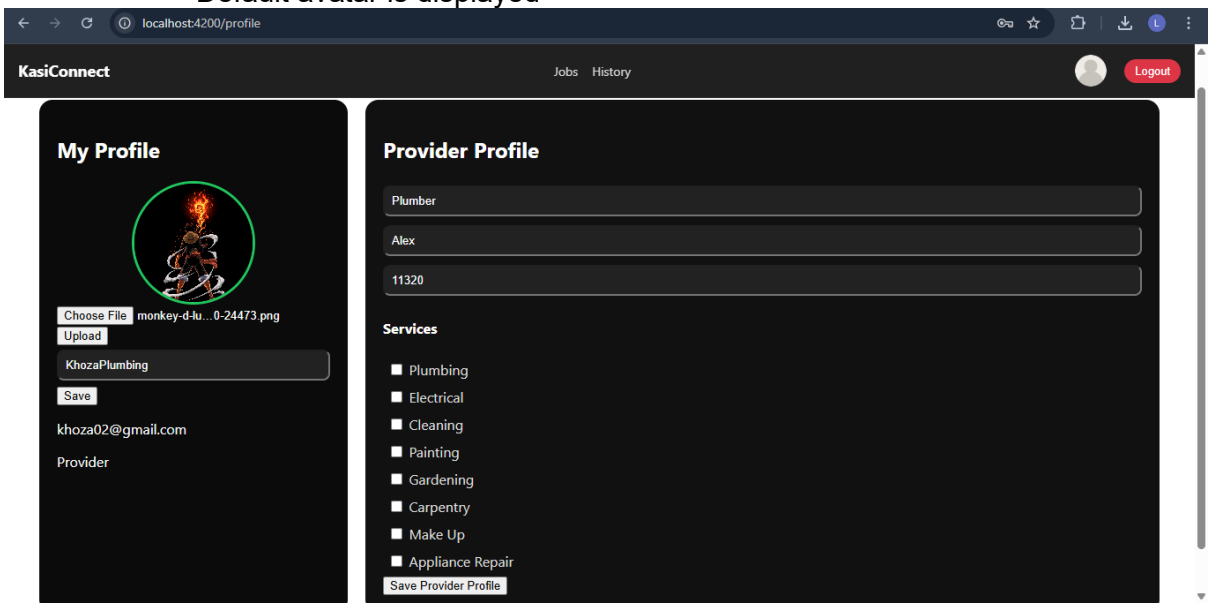
5.3 Booking History

- View all completed/rejected jobs



6. Profile Management
   Users can:
   - View profile details
   - Update name
   - Upload profile picture

   If no profile picture is uploaded:
   - Default avatar is displayed



7. System Architecture
   Frontend
   - Angular
   - TypeScript
   - Bootstrap / Custom CSS

   Backend
   - ASP.NET Core Web API
   - Entity Framework Core

   Database
   - SQL Server

   Authentication
   - JWT (JSON Web Token)

8. System Flow
    1. User logs in
    2. Backend generates JWT token
    3. Token stored in browser (localStorage)
    4. Token sent with every API request
    5. Backend validates token and role
    6. Data is returned accordingly
9. Database Structure

    Users Table
    - Id
    - Name
    - Email
    - PasswordHash
    - Role
    - ProfileImageUrl
    - ResetToken
    - ResetTokenExpiry

    Bookings Table
    - Id
    - CustomerId
    - ProviderId
    - ServiceId
    - DateTime
    - Address
    - Status

10. API Endpoints:

Auth
- POST /api/auth/register
- POST /api/auth/login
- POST /api/auth/forgot-password
- POST /api/auth/reset-password
-

Bookings
- POST /api/bookings
- GET /api/bookings/my
- PUT /api/bookings/status/{id}

Users
- GET /api/users/me
- POST /api/users/upload-profile
- PUT /api/users/update-name

11. Business Logic:
    - Customer creates booking → Status = **Pending**
    - Provider updates:
        - Accepted
        - Rejected
        - Completed
    - History shows:
        - Completed and Rejected bookings
12. Security:

- JWT Authentication
- Role-based authorization:
    - Customer
    - Provider

- Protected endpoints require valid token

13. UI Design:
    - Responsive design
    - Role-based dashboards
    - Navigation adapts based on user role
    - Profile image display with fallback avatar

14. Known Issues:
    - No real-time notifications
    - Requires internet connection
    - No email verification yet
15. Future Improvements:
    - Real-time notifications
    - Chat between customer and provider
    - Ratings & reviews system
    - Mobile app version
    - Payment integration
16. Conclusion
    KasiConnect simplifies the process of finding and booking local service providers. It provides a structured and secure platform for both customers and providers, improving efficiency and trust within the local service ecosystem.
